营销简报

姓名：孙习冉

日期：2026.10.9

活动名称：大使营销业绩——第四季度复盘

一 分析目的

评估第四季度各大使营销渠道的表现，识别各渠道的优势与短板。本次分析用于实现更精准的资金分配，优化表现不佳的板块，持续放大有效策略。最终目标是降低获客成本、提升运营效率，为企业创造更高业务价值。

二 复盘核心指标

- **转化率：**转化客户数 ÷ 线索数。衡量线索变成实际客户的能力，反映大使引流的质量，判断渠道吸引来的人群是否真的愿意转化。

- **客户获取成本（CAC）：**营销投入 ÷ 转化客户数。代表获取 1 个新客户需要花多少钱，用来评估获客的成本高低，控制预算。

- **投资回报率（ROI）：**(收入−营销投入) ÷ 营销投入。衡量渠道整体盈利水平，看投入的资金最终能不能赚钱，是判断渠道价值最核心指标

三 表现最优的渠道

根据你的分析，在各个指标维度下，哪些大使渠道表现突出?

- **最高转化率：**In-Person Events（线下活动）
- **最低客户获取成本：**TikTok Campaign
- **最高投资回报率：**TikTok Campaign

这些分析结果说明了什么?

TikTok 虽然转化率不算最高，但是获客最便宜，带来的利润最高；线下活动转化能力最强，但获客成本很高，盈利能力偏弱。一个渠道单一指标亮眼不代表整体收益好，要结合多个指标综合评估。

四 核心发现

你从数据中找到了哪些规律、趋势或是意外结论?

1. 8 个大使渠道绩效**差距非常明显**，只有两个渠道 ROI 高于全部渠道平均值（1.02）。

2. **TikTok Campaign 是综合表现最强渠道：**ROI 第一、CAC 最低，能用低成本拿到客户，是本次活动的**亮点。**

3. **In-Person Events 转化率全场最高**，但 CAC 最贵，ROI 偏低。说明线下活动转化效果好，但是预算消耗大，盈利效率差。

4. **Email Newsletter 表现稳健**，预算投入低，ROI 排第二，属于**性价比很高**的渠道。

5. **Blog Partnerships 整体表现最差**，ROI 最低，投入的资金很难回本，是低效渠道。

五 建议

团队后续应当重点投入哪 2–3 个渠道？你为什么认为这些渠道能带来最大效果?

推荐优先投入：TikTok Campaign、Email Newsletter

1. TikTok Campaign：ROI 最高、获客成本最低，花较少预算就能带来大量收益，加大投放可以持续放大利润。

2. Email Newsletter：预算少、ROI 第二，稳定高效，风险低，适合持续加码。

可以适当维持 In-Person Events 的小规模投放（它转化率高，适合品牌曝光），但不建议大幅增加预算。

同时减少 Blog Partnerships 的预算，该渠道投资回报差，资金投入产出不理想。

六 后续行动或考量事项

基于这份分析做出决策前，团队需要考虑哪些数据局限性或其他影响因素?

1. 这份数据仅为上一个季度的短期结果，短期表现不能完全代表长期效果。

2. 缺少品牌曝光、品牌口碑、粉丝长期留存等非财务指标，只看转化、成本、ROI 会忽略品牌价值。

3. 外部环境会影响结果，比如平台算法变化、活动季节因素，后续投放效果可能发生变动。

4. 数据没有考虑客户后续复购价值，本次只统计了单次转化收入，无法评估客户长期价值

Ambassador Marketing Performance – Q4 Review

Name: Sun Xiran

Date: October 9, 2026

1. Analysis Objectives

This review evaluates the performance of all ambassador marketing channels in Q4, identifying the strengths and gaps of each channel. The insights will support more precise budget allocation, underperforming segment optimization, and continuous scaling of high-impact strategies. The ultimate goal is to reduce customer acquisition costs, boost operational efficiency, and drive higher business value for the organization.

2. Core Review Metrics

• **Conversion Rate:** Calculated as converted customers divided by total leads. It measures the ability to turn potential leads into actual paying customers, reflects the quality of traffic driven by ambassadors, and verifies whether the audience attracted by each channel has real conversion intent.

• **Customer Acquisition Cost (CAC):** Calculated as total marketing investment divided by converted customers. It represents the average cost to acquire one new customer, used to assess cost efficiency and keep marketing budgets under control.

• **Return on Investment (ROI):** Calculated as (Revenue – Marketing Investment) divided by Marketing Investment. It measures the overall profitability of each channel, verifies whether the invested capital generates positive returns, and serves as the core metric to judge a channel's business value.

3. Top-Performing Channels

Based on the multi-dimensional analysis, the ambassador channels that stand out across different metrics are:

• **Highest conversion rate:** In-Person Events

• **Lowest customer acquisition cost:** TikTok Campaign

• **Highest return on investment:** TikTok Campaign

These results show that while TikTok does not have the highest conversion rate, it delivers the lowest acquisition cost and the highest overall profit. In-Person Events, on the

other hand, boasts the strongest conversion capability but comes with a high CAC and relatively weak profitability. A single strong metric for a channel does not guarantee excellent overall returns, so all indicators must be evaluated in combination.

4. Key Findings

The data reveals clear patterns, trends and unexpected conclusions:

1. There is a significant performance gap across the 8 ambassador channels, with only 2 channels delivering an ROI higher than the overall cross-channel average of 1.02.
2. **TikTok Campaign** is the top-performing channel across the board: it ranks No.1 in ROI and has the lowest CAC, enabling the brand to acquire new customers at very low cost, making it the biggest highlight of this quarter's campaign.
3. **In-Person Events h**as the highest conversion rate across all channels, but it also has the highest CAC and relatively low ROI. This confirms that offline activities

deliver strong conversion results, but consume large amounts of budget and have low profit efficiency.

4. **Email Newsletter** shows steady performance with very low budget input, ranking second in ROI, making it an extremely cost-effective channel.

5. **Blog Partnerships** is the lowest-performing channel overall, with the lowest ROI and very limited potential to recoup invested funds, marking it as a low-efficiency channel.

5. Recommendations

The team should prioritize investment in the following 2-3 channels, as they are proven to deliver the maximum business impact:

- **TikTok Campaign:** It delivers the highest ROI and lowest customer acquisition cost. Scaling investment in this channel will continuously amplify profit gains with relatively limited budget input.
- **Email Newsletter:** It requires minimal budget, ranks second in ROI, and delivers stable, low-risk high returns, making it ideal for incremental investment.

The team can maintain a small-scale budget for **In-Person Events,** as its high conversion rate supports strong brand exposure, but significant budget increases are not recommended.

Meanwhile, budget allocated to **Blog Partnerships** should be reduced, as the channel has poor return on investment and low capital output efficiency.

6. Follow-Up Actions & Considerations

Before finalizing decisions based on this analysis, the team needs to account for the following data limitations and other influencing factors:

1. This dataset only reflects short-term performance from the previous quarter, and short-term results do not fully represent long-term operational outcomes.

2. Non-financial metrics including brand exposure, brand reputation, and long-term fan retention are not included in the current analysis. Focusing solely on conversion, cost and ROI will overlook long-term brand value accumulation.

3. External factors such as platform algorithm updates and seasonal campaign fluctuations can impact results, meaning

future campaign performance may shift from current trends.

4. The data does not account for the post-conversion repurchase value of customers. This review only counts one-time conversion revenue, and cannot evaluate the full long-term lifetime value of acquired customers.
