# 能量方块产品改善恢复策略

**一 产品：**Power Squares（能量方块）

**二 问题概述：**

在第三周健康零食新品组中，Power Squares 尽管线上流量最高，转化率却垫底。它获得了 1,150 次网站访问，但转化率仅为 3.40%，是本组所有新品中最低的；平均客户评分也仅有 3.80，表现偏弱。

批注 [1]: 价格偏门高也是一个问题

**三 根本原因：**

问题出在 PDP 商品详情页内容与价值感知不足，而非需求本身。Power Squares 仅展示 1 张产品图和一段简短描述，是整组商品中详情最单薄的。客户评论明确提到"没有规格信息"和"不值这个价"，导致购物者无法判断 $5.79 是否合理；高流量说明兴趣真实存在，只是页面没有把兴趣转化为下单。

**四 推荐策略：**

我建议立即采取"价格/促销调整"作为首要动作。由于流量强劲（1,150）但转化率最低（3.40%），请供应商出资做一次临时降价或电子优惠券，可以直接检验价格/价值这道障碍，而不用等待周期较长的包装改动。同时，我们应立即要求供应商在 PDP 上补充清晰的包装规格说明和第二张产品图，因为"没有规格信息"是最直接的转化阻碍。

**五 备选方案：**

如果两周内价格测试未能将转化率提升至约 4%，再考虑"产品调整"——具体审视包装规格或份量是否与客户预期匹配。只有当价格和 PDP 修复都失效后，才考虑"替换商品"，因为 1,150 的高流量信号说明真实需求存在，不应过早下架该商品。

**六 风险与注意事项：**

作为定价已达 $5.79 的国民品牌，供应商可能不愿出资承担折扣。补充 PDP 素材需要供应商配合，可能耗时一到两周。此外，如果折扣持续过久，可能训练客户只等促销再下单，因此价格测试必须设定明确的截止日期。

**批注 [2]:** 促销测试虽然启动时间较快，但可能无法完全揭示根本问题。如果价格不是主要障碍，可能不会带来改变。供应商还可能需要时间审查和批准变更。

# Power Squares Product Recovery Strategy

**1. Product:** Power Squares

**2. Issue Summary:**

In the Week 3 healthy snacks new-launch set, Power Squares has the highest online traffic but the lowest conversion rate. It received 1,150 site visits, yet its conversion rate is only 3.40% - the lowest among all new products in this group. Its average customer rating is also a weak 3.80.

**3. Root Cause:**

The problem lies in insufficient PDP content and poor perceived value, rather than weak demand. Power Squares displays only one product image and a short description - the thinnest detail page in the entire group. Customer reviews explicitly mention "no size information" and "not worth the price," making it impossible for shoppers to judge whether $5.79 is reasonable. The high traffic proves genuine interest exists, but the page fails to convert that interest into purchases.

**4. Recommended Strategy:**

I recommend immediately taking "price/promotion adjustment" as the primary action. With strong traffic (1,150) but the lowest conversion rate (3.40%), asking the supplier to fund a temporary price reduction or digital coupon can directly test the price/value barrier, without waiting for the longer packaging changes. At the same time, we should immediately require the supplier to add clear packaging size specifications and a second product image on the PDP, because "no size information" is the most direct barrier to conversion.

**5. Alternative Options:**

If the price test fails to raise the conversion rate to around 4% within two weeks, then consider "product adjustment" - specifically reviewing whether the packaging size or portion matches customer expectations. Only after both price and PDP fixes have failed should "item replacement" be considered, because the high traffic signal of 1,150 indicates real demand, and the product should not be taken off shelves prematurely.

**6. Risks and Considerations:**

As a national brand already priced at $5.79, the supplier may be unwilling to fund discounts. Supplementing PDP assets requires supplier cooperation and may take one to two weeks. In addition, if the discount lasts too long, it may train customers to wait for promotions before buying, so the price test must set a clear end date.
